ALLTORQUE®

Two Piston Pneumatic Actuator

Flow-Valves sp. z o.o.
ul. Hubala Dobrzańskiego 10
85-826 Bydgoszcz
tel. + 48 52 32 77 344-5
marketing@flow-valves.pl

Design & Construction

1. Indicator
Indicator according to VID/VIE3845 is convenient for mounting accessories such as limit switch box, Positioner and etc.

2. Pinion
The design of the nickel-plated alloy steel integrated forging pinion drive is according the NAMUR,ISO5211 and DIN3337 standards. Special standard are available upon request.

3. Actuator Body
High quality aluminum alloy extrusion formed. The surface has been treated by anodized hardening followed by epoxy polyester coating. Other surface treatments are available e.g. PTFE and Nickel plating as well as other colour coatings on request.

4. End Cap
The surface has been treated by anodized hardening followed by epoxy polyester coating. Other surface treatments are available on request e.g. PTFE and Nickel plating as well as other colours on request.

5. Piston
Manufactured from Die-cast aluminum and treated by anodized hardening process. Symmetric mounting of the piston helps to ensure easy maintenance. Reverse action requirements can be achieved by inverting the pistons.

6. Adjusting Bolt
The two independent adjustment bolts can adjust opening and closing of the mounted valve within±5°.

7. Spring
Preloaded high grade springs with surface epoxy resin painted, which can be demounted conveniently to satisfy different requirements of torque by changing quantity of springs.

8. Piston Ring
Manufactured from low friction long life material POM. Can be easily changed for maintenance purposes.

9. O-rings
Standard NBR rubber O-rings provide trouble-free operation at standard temperature ranges. For other temperature requirements relevant materials can be offered on request.
10. Air Connection
Conforms to NAMUR standards

11. All stop parts are manufactured from SS304.

Operations

The standard rotation is clockwise to close; counter-clockwise rotation is obtained when port A is pressurized.

Double Acting Operation Function (Standard Rotation) Top View	
A ⇧ ⇩ B	A ⇩ ⇧ B
CCW Air supplied to Port A forces the pistons apart and toward end positions, with exhaust air exiting at Port B, a counter-clockwise rotation is obtained.	**CW** Air supplied to Port B forces the pistons together with exhaust air exiting at Port A, a clockwise rotation is obtained.
Single Acting Operation Function (Standard Rotation) Top View	
A ⇧ ⇩ B	A ⇩ ⇧ B
CCW Air supplied to Port A forces the pistons apart and toward end positions, compressing the springs with exhaust air exiting at Port B, a counter-clockwise rotation is obtained.	**CW** On loss of air pressure (air or electric failure) at port A allows the springs to force the pistons to the centre position with exhaust air exiting at Port A, a clockwise rotation is obtained.
Explode View
Compared with other ordinary actuators, we drill four extra thread holes on the bottom of actuator. Using our connecting plates, it can be connected with all kinds of international standard valve flanges fairly.

The large diameter hole of the output pinion on the bottom makes our actuator suitable for all kinds of valve stems and connecting keys by using our insert. Efficient and economic.

Extra deep hole for pinion shaft on the bottom of actuator is suitable for any long size valve stem.

Parts List

No.	Part Description	Q.TY	Materials	Surface Treated	Optional Material
1	Socket Head Screw	8	SUS 304		
2	End Cap	2	AL380 ≤ DFS 200 WCB ≥ DFS 240	Anode Hardening +Polyester Coating	CF8/CF8M
3	"O"ring (Cylinder Head)	2	NBR Rubber		Viton / Silicone Rubber
4	Spring	2–12	Spring Steel	Epoxy resin Coating	
5	Piston Ring	2	POM		
6	"O"Ring (Piston)	2	NBR Rubber		Viton / Silicone Rubber
7	Piston	2	AL380	Anode Hardening	
8	Stopper	2	NBR Rubber		Viton / Silicone Rubber
9	Guide Ring	2	PA6		
10	Guide Block	2	PA6		
11	Indicator Bolt	1	ABS		
12	Indicator Arrowhead	4	ABS		
13	Indicator	1	ABS		
14	Snap Ring	1	Stainless Steel		
15	Washer	1	SUS 304		
16	Disc Bearing	1	POM		
17	Washer	1	SUS 304		
18	Body	1	AL6063–T6	Anode Hardening +Polyester Coating	CF8/CF8M
19	Plug	2	PVC		
20	"O"Ring (Pinion Top)	1	NBR Rubber		Viton / Silicone Rubber
21	Bearing (pinion Top)	1	POM		
22	Disc Bearing	1	SUS 304		
23	Stroke Adjustment Stop	1	SAE 1020	Nickel Plated	CF8/CF8M
24	Pinion Shaft	1	SAE 1045	Nickel Plated	SUS304/SUS316
25	Bearing(Pinion Bottom)	1	POM		
26	"O" ring (pinion bottom)	1	NBR Rubber		Viton / Silicone Rubber
27	"O"Ring (Adjusting Bolt)	2	NBR Rubber		Viton / Silicone Rubber
28	Metal Washer	2	SUS 304		
29	Nut	2	SUS 304		
30	Adjusting Bolt	2	SUS 304

1. Top mounting connection is in line with VDI/VDE3845 standards, permitting direct installation of accessories such as positioner or limit switch box.

2. Bottom mounting connection is in line with ISO5211 and DIN3337 standards.

3. Air supply connection is in line with VDI/VDE3845 and NAMUR standards, and can install solenoid valves conveniently.

＊ The above indicated moving time of the actuator, are obtained in the following testcons:
    (1)Room temperature
    (2)Actuator stroke 90°
    (3)Solenoid valve with orifice of 4mm and flow capacity QN 400L/min.
    (4)Inside pipe diameter 5mm
    (5)Medium clean air
    (6)Air supply pressure 5.5 bar（79.75psi）
    (7)Actuator without external resistance load

Service Conditions to Consider

1. Operating media:

Dry or lubricated air, or inert gas, or non-corrosive gases that
compatible with actuator inner parts and lubricant are available.
The media temperature must 10℃ lower than ambient temperature
at least, and the maximum particle diameter must less than 20μ.

2. Air supply pressure:

3 Bar (40 PSI) ~ 8 Bar (120 PSI)

3. Operating temperature:

a. Standard: −20℃ ~ +80℃
b. Low temperature: −40℃ ~ +80℃
c. High temperature: −15℃ ~ +150℃

4. Travel adjustment:

Have adjustment range of ±5° for the rotating 90°.

5. Lubricant:

Use the lubricant that temperature range at −20℃ to +80℃. Select
special lubricant when the operating condition is low temperature or
high temperature.

The Grade of Anticorrosion & Recommended Service Environment

Parts	The Grade of Anticorrosion	
	A	B
Body	Anodise Hardening + Epoxy Polyester Coating	Stainless Steel CF8/CF8M
CAP	Anodise Hardening + Epoxy Polyester Coating	Stainless Steel CF8/CF8M
Drive Shaft	Carbon Steel Nickel Plated	Stainless Steel CF8/CF8M
Piston	Anodise Hardening	Stainless Steel CF8/CF8M
Service Condition	Normal Condition or Low Thickness Acid Environment	High Thickness Acid Environment

Actuator Sizing Guide

Actuation sizing data:

◎ This reference data are designed to help choose DFS actuator. Before installing the DFS actuator on valve, you must consider the following factors:

◎ The operating life of this actuator is 3 years or 1 million times.

◎ Non-metal parts should be replaced when the actuator is used over half a million times.

◎ The air pressure for the actuator.

◎ The operation torque of valve coupled with safety factor that manufacturer recommended (based on operations).

◎ The types of actuator, i.e. Double acting actuator and Spring return actuator, and its output torque under certain supply air.

◎ Actuator's direction of rotation and failure mode (failure open and close)

◎ It is very important to choose a correct actuator. For example, the stem will be over forced if the actuator is too big. Whereas, there will be not enough torque to operate valve if the actuator is too small. Usually, we consider the required torque to operate valves is from the frictions between metal parts of valve (such as ball and disc) and seals (body). According to the valves' working condition, a lot of factors can influence the torque, such as operating temperature, frequency of operation, management and pressure difference, delivery media (lubricated, dry, muddy).

Below quoted torque characteristics of three different types of 90° travel valves:

ball valve torque — 100%, 70-80%, 25-30%, torque, close, open, valve rotation

butterfly valve torque — 100%, 15-20%, torque, close, open, valve rotation

plug valve torque — 100%, 80-90%, torque, close, open, valve rotation
Ball Valve:

Ball valve construction concept is based essentially on a polished ball (include a through port) contained in two seats (upstream and downstream). The ball rotation allows the flow, or stops the flow through the valve. Differential Pressure between upstream and downstream pressures forces the ball against the downstream seat (floating ball). In this case, the valve torque is generated by the friction between ball and seat and also between stem and packing. As shown in the diagram , the highest torque point is when, in presence of pressure, the valve is in the closed position, and passes to the open position (breakaway torque).

Butterfly Valve:

Butterfly valve construction concept is based essentially on a disc fixed on an axis, which in the closed position, is completely contained by the seat. The open position is obtained when, with a rotation, the disc (through its stem) becomes parallel to the flow. On the contrary, the closed position is obtained when the disc is perpendicular to the flow. In the case of the butterfly valve, the torque is generated by the friction between the disc and the seat, by the stem packing and also by the differential pressure that forces on the disc. The highest torque point, as shown in the diagram, is in the closed position, and only after a small rotation it is considerably reduced.

Plug Valve:

The construction principle of the plug valve is basically according to the plug sealed in the conical cock body. There is a channel at a direction of the plug. Along with plug screws in the valve, the valve will open or close. The operating torque is decided by the friction of the valve seat and the plug during the open and close process and is often not influenced by the fluid's pressure. As shown in the picture. The torque is maximal when the valve closes. As without the influence of the pressure, the superior torque will be kept at the following operation.
Actuator Sizing Guide

Double Acting Actuation Guide:

The output torque of rack and pinion pneumatic actuator=piston pressure (air supply pressure) × pitch radius (lever of arm), as Fig. Ⅰ. Besides, the friction resistance and efficiency are very high. As Fig. Ⅱ, both of the output torque are linear when CCW or CW. The suggested safety factor for double acting actuators under normal working conditions is 15%–20%.

Example (check the technical data sheet)

◎ Butterfly valve's output torque=60NM

◎ Safety factor (20%)=60NM × (1+20%)=72NM

◎ Air supply pressure =5 bar

◎ When air supply pressure is 5 Bar, the kind of DFS double acting actuator with output 72NM you need at least is DFS085 for this operation.

Actuator Sizing Guide

Spring Return Actuation Sizing Guide:

In the application of SR actuator, the output torque is coming from two different process of operation (Fig.1 and Fig.2). According to the travel position (0° and 90°), every operation gets two different torque. SR actuator's output torque=pressure (air or spring work on the piston)×pitch radius (lever of arm).

The first situation (Fig.1): output torque is coming from air supply pressure inside the Port 2 and squeezing the spring. It is known as "air travel output torque". In this situation, air supply pressure pressurized from 0 ° position to 90 ° position. As squeeze spring have a reaction force, torque is decreasing gradually from the starting 0 ° position to 90 ° position (Fig. A).

The second situation (Fig.2): the output torque is coming from the spring return forcing work on the piston when out of air. It is known as "spring travel output torque". In this situation, because of the comeback of spring, torque is decreasing gradually from the starting 90° position to 0° position (Fig. B).

air stroke (output toeque)

spring stroke (output toeque)

Fig A — torque Nm, air stroke, 0° actuator rotation 90°

Fig 2 — torque, pitch radius (lever arm), spring force, force

Fig B — torque Nm, spring stroke, 0° actuator rotation 90°

In a word, DFS actuator is designed base on the fact that two situations get one balanced torque, i.e. the numbers of springs are the same as air supply pressure readings each side (4 bar, 4 springs each side), as shown in Fig. C. There are possibilities to get an unbalanced torque in every situation, as shown in Fig. D, by changing the number of springs and air supply pressure(such as six springs each side and 5.5 bar air supply pressure, and vice versa).

unbalanced torque

Fig D

air stroke · spring stroke
torque Nm
0° ⬅ actuator rotation ➡ 90°

In the application of SR actuator, there are two situations: out of air open or out of air close. The suggested safety factor for spring return actuators under normal working conditions is 20%–25%.

Example (check the technical data sheet):
◎ Springs closed (out of air)
◎ Ball valve's output torque=100NM
◎ Safety factor (20%)=100×(1+20%)=120NM
◎ Air supply pressure= 5 Bar

The selected actuator is DFS145, therefore it gets the following data (Fig.E):
◎ Spring stroke 0° =131NM
◎ Spring stroke 90° =205NM
◎ Air stroke 0° =289NM
◎ Air stroke 90° =215NM

Trouble Shooting

| Trouble Phenomena	Checking Item	Solution
Pneumatic Valve Does Not Act.	1 Does the solenoid work normally? 2 Is the circuit burned? 3 Is the mandrel of the solenoid blocked by impurity?	1 Replace the solenoid 2 Replace the circuit. 3 Remove the impurity
	With air supplying the pneumatic actuator, are the o–rings or the cylinder broken?	Replace the broken o–rings and cylinder body
	Is impurity blocking the valve?	Clean out the impurity, replace the broken parts
	Is the handle of the manual equipment at the manual state?	Put the handle to the pneumatic state
Acting Slowly	Is the air supply pressure insufficient?	Improve the air pressure
	Is the output torque of pneumatic actuator not enough?	Select a bigger model of the pneumatic actuator
	Is the valve stem or other parts assembled too tightened?	Reassemble and adjust the valve
	Is the air supply pipe blocked making the air flux too small?	Clean out the block, replace the filter stem
The Feedback Has No Signal	Is the power shorted out or stopped?	Check the circuitry
	Is the cam of the feedback in the incorrect position?	Adjust the cam to the correct position
	Is the jiggle on–off broken?	Replace the jiggle on–off

We design and produce a series of connection flange and adapter kit to install actuator on valve conveniently, or use ISO bracket or ISO gear box as a connection transition.

Connection braket,CF8 (304) castings. converted szie:
F03/F04 to F03/F05   H=29.5mm;
F04/F05 to F04/F05   H=29.5mm;
F04/F05 to F05/F07   H=29.5mm;
F05/F07 to F07/F10   H=40.0mm;
F07/F10 to F07/F10   H=44.0mm;

Other sizes and material available supply.
